## BUSINESS TERMS

**PRICES.** The prices in this list are for trees and plants dug and loaded at Westbury Nurseries. Five, 50, and 500 plants at the 10, 100, and 1,000 rates, respectively. Selected specimens at advanced price, according to quality of plant chosen. Items left unpriced are generally large specimens that are usually priced to include delivery on tree-mover and planting. Prices subject to change without notice.

**DELIVERY.** Prices on ordinary-sized nursery stock are usually for stock dug and loaded at the Nursery. Delivery by wagon is charged according to distance and expense. Stock to be shipped by freight or express will be carefully packed in straw bales and boxes, charged at cost of material and labor. Delivery to railroad is free, where our responsibility ceases.

Large trees on a tree-mover, and large evergreens, are priced, by correspondence, as follows: (1) To include delivery and planting in hole prepared by us; (2) to include delivery and planting when hole is prepared and assistance rendered by purchaser; or, (3) delivery and planting charged by the day.

**TERMS OF PAYMENT—Net Cash.** Accounts will be subject to sight draft sixty days from the date of shipment. Unknown correspondents should send satisfactory reference or cash with order. Money orders may be obtained for Westbury Station, Nassau county, New York.

**WE DESIRE THAT ALL OUR CUSTOMERS BE FULLY SATISFIED,** and wish to be promptly notified any errors that they may be rectified. We do not agree to consider complaints later than ten days after delivery.

**TRUE TO NAME.** Without boasting infallibility, we warrant our stock true to name, and will replace any that may prove otherwise, or refund the original price, but we will not be held responsible for more than the original price of the trees.

**SUBSTITUTION.** Late in the season we may be out of some varieties and sizes of fruit and other trees, and will substitute similar varieties and sizes unless otherwise ordered.

**GUARANTEE.** The living of trees is largely dependent upon conditions of weather and after-care beyond the nurseryman's control; therefore, we do not guarantee trees to live after leaving the Nursery in good condition, without previous agreement and special price. If guarantee is desired, customers are requested to so state when asking prices.

**OBJECT OF THIS PRICE-LIST.** By giving quantities in this list, our aim is to enable customers to order stock on hand, thus avoiding delay and disappointment. It shows dimensions of **large specimens** in sizes never before offered by nurseries, which save from fifteen to forty years of waiting. In offering **smaller and cheaper stock**, grown from Long Island and Northern seed, that fits the conditions and is hardy, we enable the purchaser to obtain results with the minimum outlay.

Address all orders to **Isaac Hicks & Son, Westbury Station, Nassau county, New York.** Local and long-distance telephone, 68 Westbury. Telegraphic address, Westbury Station, New York.

Liquidambar is reputed to be difficult to transplant. We anticipate little difficulty with this stock. They make most beautiful and symmetrical trees of the highest class. We recommend the planting of this small stock in private nurseries and in large landscape plantations. It is sure to be hardy, because from Long Island seed, whereas southern stock planted here we have found to winterkill.

## DECIDUOUS TREES, MAPLE.

<b>Maple, Norway.</b> 20 to 24 ft. high, 6 $\frac{1}{2}$ in. diam., 10 to 12 ft. spread	12	\$35 00

The price of these 5- to 8-inch diameter Norway Maples at \$15 to \$38 is low, considering the fifteen to eighteen years it has taken to grow them, and the wide area given each tree—225 square feet. They are low in price according to the cost of cultivating, manuring, pruning and transplanting them. They save eight to twelve years over the usual size—1 $\frac{1}{2}$  inches in diameter and 10 feet high.

These trees are not the left-over culs from old blocks. That was the old system of growing extra-sized trees. Under those conditions, the trees were frequently crooked, with unsymmetrical tops and long, coarse roots.

These trees have been especially grown to make transplanting successful. They have abundant fibrous roots which, by the methods of digging of our invention, are carefully preserved. Such trees grow vigorously from the start and the smaller trees do not quickly overtake them,—a statement formerly made to discourage planting large trees. Page 21 shows how they are grown. They are numbered specimens, pruned to exactly uniform sizes; that is, we can supply an avenue 20 feet in height, 10 feet in spread. These trees are often used by architects in formal plantings, to be trimmed to arch a walk. Results which in France would take ten years to produce, can be produced here immediately.

These Sycamore Maples are darker in foliage than the Norway, perfectly straight and symmetrical. They will make magnificent formal avenues and are excellent trees at the seaside for their thick, heavy foliage which withstands the salt spray. The prices are especially low for trees of this size and quality, as we wish to reduce our stock, the trees being in blocks which will crowd if they remain two years longer.

On pages 19 and 22 are shown the 5- and 8-inch sizes. These are grown 15 feet apart, as in an orchard, and have been pruned to symmetrical form. With the Catalpas, these Maples give the largest amount of shade for the cost, and save the most years of waiting. It is not the best tree for all purposes, but it is a good tree, and the stock we offer is in the best possible condition for vigorous growth. They are easily handled on our tree-movers, and the price to deliver and plant is low. Page 27 shows the result of planting a tree 10 inches in diameter to shade a new house on a bare lot.

For street planting on real estate subdivisions, trees 10 and 12 feet high are a good investment. They transplant readily and grow rapidly the first year, especially if the ground is mulched with 3 inches of manure.

We believe ours to be the only stock of large Pin Oaks in any nursery. They are valuable for immediate lawn planting, as illustrated on page 23, 24, 25 and 27. One fortunate thing about the Pin Oak is that its long, flexible branches can be tied down to go under trolley wires. The roots are tough and flexible, and, therefore, large trees can be carried across ferries or through narrow streets with ease and economy. A number of these larger Pin Oaks have been trimmed to uniform sizes, so that they are valuable for avenue planting or in matched pairs for entrances.

The little trees at less than one cent each are worth planting in private nurseries or in extensive landscape planting. The trees at \$20 per 100, 3 feet high, should be used freely in mixture with other shrubs and trees because they will quickly produce good results at a low cost.

Many object to the cost of Oaks when they are as large as the usual size of Maple, Elm and Poplar—10 and 14 feet. Plant these little ones and you will find that they make as rapid annual growth as the Norway and Sugar Maples. There should be hundreds of miles of Long Island roads shaded with native Oaks grown from Long Island seed. Ours is the only supply, and it is a very cheap one.

A large part of Long Island is underlaid by sand and gravel, giving excessive drainage. The following Oaks thrive well under such conditions: White, Chestnut, Post, Black, Scarlet and Black Jack Oak. The economical thing to do is to plant them in large quantities when of small size. Our trees 1 to 5 feet high are transplanted, and were root-pruned last year.

## Evergreen Trees (Conifers)

Several years ago we decided that Long Island needed evergreens to make it a more ideal residence region. The usual method of importing small evergreens for immediate sale or to grow on, is expensive and ultimately unsatisfactory, because many of the varieties are not permanently successful.

Therefore, we collected seed from Long Island trees and grew trees in large quantities so that we could offer them at low prices. We believe there is no other opportunity in the eastern United States to purchase evergreens so cheaply. Of the large sizes, 6 to 30 feet high, we have several thousand. These are root-pruned and ready for delivery at any time of the year. These trees give immediate, all-the-year-round service, and are priced as low as is consistent with the expense of handling such heavy trees.

We have invented methods for successfully clamping large balls of earth of several tons weight and holding them securely until planted. For illustrations showing this stock, and the results attained by planting it, send for our Catalogue, "Large Evergreens for Immediate Planting." Prices in the latter are superseded by the prices in this list.

The cheapest way to get large evergreens in large quantities is in car-load lots direct from the collecting fields. We have over fifty car-loads of White Pine, White Spruce and Red Pine, root-pruned, ready for shipment in August, 1909. These trees are from 8 to 22 feet in height. They are broad, bushy specimens, which will give immediate results for ornament, windbreak or screen. Samples of these trees may be seen at our nurseries, and photographs of them will be sent upon application. These large, collected trees are cheap because the only expense is that of collecting them. There is practically no expense for the many years they have been growing.

**BALL OF EARTH.** All of our evergreens are dug with a ball of earth except the small sizes, as the Pines and Spruces up to  $1\frac{1}{2}$  or 2 feet. Therefore, in comparing prices, please remember that our evergreens have more than twice as much roots as the average, and that failure is very rare with them. They make vigorous, dense growth from the start. See pages 38 and 39.

It used to be considered impracticable to transplant the Red Cedar. We have learned how. The large quantities in stock enable you to pick out specimens of any size, and of quality for any purpose, from the irregular trees, suited to mass planting to the sheared specimens for formal gardens. These can be shipped in car-load lots at any time. Therefore it is possible to make a permanent evergreen screen 25 feet high, no matter where you are located.				
<b>Cedar Arches.</b> 8 ft. high, 7 ft. spread . . . . .	60.	32 00	300 00

12 ft. high, 12 ft. spread . . . . .	400 ft.			
29 ft. high, 24 ft. spread . . . . .	48 ft.			

We have successfully transplanted several Hemlock hedges, so that we know what rich and dignified results may be obtained the first year.

The Hemlock always keeps good foliage at the bottom because of its drooping habit. In case, however, any gaps occur, they may be immediately filled by a small plant which blends with the older plants. Architects should consider this material in comparison with brick and stone walls for garden enclosures or screens.

Hemlock, Carolina. <i>T. Caroliniana</i> . 3 ft. high . . . . .	30	50	3 00
5 ft. high, 3 to 4 ft. spread . . . . .	12	2 00	

We offer an unusual variety of sizes of Hemlock, ranging in age from three years to forty years. All the stock has been root-pruned and is in excellent condition for transplanting.

This is a very rare tree, with flowers of the finest quality. It resembles the old-fashioned Camellia. The pure white flowers are about 2 inches across and are of a delicate, satiny texture. It blooms in midsummer. It makes a pyramidal tree of good habit, 15 feet high, and is worthy to rank with the dogwood in both foliage and flower.

Styrax *Americana*. 6 to 9 ft. high . . . . .

The foliage of this little tree is always charming, because it is so neat, dark green and glossy; not surpassed in these qualities even by the California Privet. It grows as a dignified little tree, with horizontal branches like a Beech or Dogwood, thickly hung with thousands of creamy bells of delightful perfume. It resembles the Silver Bell, but blooms about a month and a half later, in July.

This Catalogue presents an unusual number of the small-growing, flowering trees, as Dogwood, Andromeda, Double-flowering Cherry, Judas, Magnolias, Yellow-wood, Thorn, Stuartia, Hornbeam and Siberian Pea Tree. They are offered at low rates and should be used largely in landscape planting, as they form a relief from the rather monotonous, even-topped shrubberies now in vogue.

These little plants grow but a few inches a year, and may be used to border garden paths instead of Boxwood. The plants may be divided up and spread out so the cost will be much less than the latter. It may also be used at the edge of a group of shrubs, as bordering a path where large-growing shrubs would spread out and get in the way.

Weigelia <i>florida rosea</i> . 6 to 12 in. high	300.	08	60	5 00	
2 ft. high	50.	15	1 20	10 00	
Weigelia <i>hybrida</i> , var. <i>Eva Rathke</i> . 1½ ft. high.	18.	20	1 50		
Weigelia, Yellow. <i>Diervilla lonicera</i> ; syn., <i>D. trifida</i> . 3 ft. high	150.	12	1 00	8 00	
6 ft. high	80.	15	1 20		
These plants, 6 feet high, are very wide and bushy, and at the price quoted will make a cheap mass of healthy, shining foliage, with interesting yellow flowers.					
Weigelia, White. 6 to 12 in. high	100.	08	60	5 00	
3 ft. high	20.	25	1 80		
Weigelia, Variegated Leaf. 1 ft. high	30.	15	1 20		
Willow, Japanese Pussy. <i>Salix multinervis</i> . 2 ft. high	60.	15	1 20		
Even in January or February this makes an interesting point in the landscape, for its silvery catkins glisten and shine in the sun. It is, therefore the first shrub to flower.					
Witch Hazel. <i>Hamamelis Virginiana</i> .					
2 to 6 in. high, 2 yrs.	Per 1,000, \$30.	1,050.	06	50	4 00
6 to 9 in. high	400.	08	60	5 00	
1½ ft. high	40.	20	1 50		
2 ft. high	20.	25	1 80		
This may be mixed with Pine and Hemlock to make a border plantation. It is a shrub that will not seriously damage the evergreens and will give that community of interest which is so welcomed by the evergreens. It is the latest of all autumn flowers and it shows best against the green background of the evergreens. In November and early December, when all else in the garden is dormant, this surprises one with a delicate and stimulating perfume.					
Yellow Root. <i>Xanthorrhiza apifolia</i> . 6 to 12 in. high	430.	12	1 00	8 00	
Long Island people have not learned to use this and other similar cover plants. We will some day learn that Privet and grass are not the two nearly exclusive types of landscape material. This shrub makes a thick mat about 2 feet high, covering the ground under trees and shrubs.

## Hardy Garden Flowers

Our plants are all field-grown, and are nearly all large clumps, larger than usually sold. Note also the low prices at which they are offered. This permits their use in large quantities for naturalizing, cover planting, and large groups in shrubberies. Lower rates on large quantities of our selection.

<i>Dicentra spectabilis</i> . Bleeding Heart.....	40.	20	1 50	
<i>D. eximia</i> .....	125.	10	80	6 00

A delicate fern-like plant, generally admired by those who see it in our Nursery. It is suitable for planting in the woods and also fulfills all the requirements of a garden plant, as it has good foliage and flowers all summer.

<i>Dictamnus fraxinella</i> . Gas Plant.....	20.	20	1 50	
<i>Digitalis</i> (Foxglove), Pink and Rose.....	600.	10	80	5 00
White.....	100.	12	1 00	8 00

This stately plant is very showy in the garden, and is equally appropriate for naturalizing among trees and shrubs.

<i> Doronicum platagineum excelsum</i> .....	25.	20	1 50	
<i>Eryngium amethystinum</i> .....	25.	15	1 25	
<i>Eupatorium coelestinum</i> . Hardy Ageratum.....	100.	10	80	6 00

<i>F. lancifolia variegata</i> .....	30.	15	1 25	8 00
<i>F. subcordata grandiflora</i> .....	300.	15	1 25	10 00

This is offered at so low a rate that the opportunity should be taken to plant it in quantity. Its ivory-white flowers appear for a long time during midsummer.

HARDY GARDEN FLOWERS, GAILLARDIA to MYOSOTIS.	Quantity	Each	Per 10	Per 100
	500	\$0.10	\$0.80	\$6.00
<b>Gaillardia grandiflora.</b> Blanket flower.....				
There is no plant in the garden to which one may go with more confidence of always finding good cut-flowers than to this. The stems are long and the rich bronze, red and yellow flowers will harmonize with most interiors.				
<b>Gentiana Andrewsii.</b> Closed Gentian .....	100.	12	1 00	8 00
<b>Gypsophila paniculata.</b> Baby's Breath .....	20.	15	1 25	
<b>G. repens.</b> .....	90.	10	80	6 00
This comparatively unknown plant is valuable as a cover plant. It makes a tuft of dense, small leaves, close to the ground.				
<b>Helenium autumnale superbum.</b> Sneezeweed.....	30.	15	1 25	
<b>Helianthus Maximiliana.</b> Sunflower.....	50.	10	80	5 00
This is unusual in gardens, and will be welcomed for its late bloom after hard frosts as well as for its intrinsic beauty.				
<b>H. mollis.</b> .....	125.	10	80	5 00
<b>H. orgyalis.</b> .....	25	15	1 25	
<b>H. rigidula,</b> var. <i>Miss Mellish</i> .....	10	15	1 25

<b>H. Thunbergii</b> .....	25	15	1 25	
<b>Hibiscus Moscheutos</b> Marsh Mallow; Rose Mallow.....	300	10	50	4 00
At the seashore this plant is excellent as its foliage is not browned or broken. Its showy flowers are produced all summer.				
<b>Heuchera sanguinea.</b> Alum Root.....	25	15	1 25	
<b>Iberis sempervirens</b> .....	25	15	1 25	
<b>Iris Germanica.</b> German Iris. Fleur-de-lis.—

<i>Madame Chereau</i> .....	150	15	1 25	
<i>Bronze</i> .....	300	10	1 25	
<i>Yellow, brown falls</i> .....	50	15	1 25	
Nothing ever discourages this species and its site always looks well in the garden, even after flowering. The variety Walneri is a light blue variety which we offer at low rates and recommend for planting both in ordinary soils among shrubbery and in damp situations.				
<b>I. pseudo-acorus</b> .....	25	15	1 25	
<b>I. Kämpferi.</b> Japanese Iris in variety.....	1,200	12	1 00	8 00

<b>Liatris pycnostachya.</b> Button Snakeroot.....	185	10	80	6 00
<b>L.</b> , Devil's Bit.....	125	10	80	6 00
This is a comparatively rare plant, which attracts considerable attention in our Nursery, where its tall spikes are one of the most conspicuous flowers of its season, in late summer. It is suitable for the background of the flower-border and also for naturalizing in shrubberies or along the edge of a meadow.				
<b>Lilium candidum.</b> Madonna Lily.....	60	15	1 25	
<b>L. umbellatum</b> .....	12	15	1 25	
<b>L. speciosum rubrum</b> .....	10	15	1 25

N., Single Yellow.....	Per 1,000, \$4.	.4,000.....	.01	.08	.50

These clumps can be planted from our Nursery even when in flower. In the early spring, when they are in bloom, is the time to send us an order for a few thousand to be planted in September. They may be dotted through the grass. The simplest way to plant them is with a sharp stick.

Atropurpurea. Purplish rose.....	Per 1,000, \$40.	.1,000.....	.10	.80	6 .00

This could be planted at any time of the season. Our clumps can be torn in pieces and each little piece makes a plant. When planted as a cover plant it holds its own. Mixed with other plants, we have no doubt that it would thrive on the sand bluffs of the north shore of Long Island, the holding of which is such a serious economic problem.
